

Face Fit | Qualitative Certification

Course Introduction

Our Face Fit session is comprised of a short classroom-based session, during which the legislative requirements and practical importance for Face Fit Tests are outlined.

This is followed by a practical session where students will learn to correctly fit their own RPE prior to undergoing a Face Fit Test.

The session is delivered by experienced tutors. As such, tutors will also be able to provide extensive guidance on equipment; from FFP1, FFP2 and FFP3 disposable masks, through to P1, P2 & P3 half masks. This ensures that you are protected, safe in the knowledge that operatives are equipped with the correct RPE. We recommend you to have an FP3 adjustable strap mask (non disposable) for this test.
